The Last Spawning
Necromancy Reagents

I sit and write to you
about what remains of
the rare Necromancy
reagents, in the realm
known as Sosaria...I
have gone to great
lengths to gather the
materials Ive needed
to perform this study
and bring to you an
accurate account of
the uses and locations
of these ancient
ingredients. A
warning....beware the
powers of
Necromancy....for
Oblivion awaits all
who are unwise in
their use of it's
powers.

Fertile Dirt

Our quest begins in
the dungeon of
Despise, where we
must track down our
first reagent...and
remove it from the
corpse of an earth
elemental. As legend
would have it, all
elementals are formed
by random "bubbles" of
energy which, when
coming in contact with
the elements such as
fire, water, wind,
blood, acid or in this
case earth, form a
living creature of
immense power. It is
written the flesh of
an earth elemental,
also know as Fertile

Dirt is imbued with this excess magical power and can be used by a Necromancer to cast spells of protection. It may also be use for spells involving the element of earth such as Rock Flesh, Golem, and Meteor Swarm. Today, Fertile Dirts magical attributes have been replaced by the use of the much more abundant and efficient reagent Garlic. No alchemistic uses have been found for Fertile Dirt
